🗣️ As part of my assignment, I selected PhonePe, a digital payment app that I use regularly. The purpose of this assignment is to understand the app from a user's perspective and analyse how its features and design support everyday users.

1. 👤 WHO IS IT FOR?
💻 phone pay is for people who need to make a digital payments in their daily life payments and recharge mobiles, pay bills, transfer money, and use financial services.

🎯 Target users

👩‍🎓Students
👨‍👩‍👧‍👦 Parents
🕴️ Merchants
🤳Online shoppers
👫 Customers

➡️At what moment ?⌛

⏩ Users open PhonePe when they need to quickly send money, scan and pay at a shop, recharge, or pay a bill,paying loans,saving gold or money, investments on mutual funds.

2. 💸HOW DOES IT STAY A LIVE ?
🏦Loans : phone pay gives loan options from other companies. when I take a loan through phone pay , it gets a commission from that company.
💳 Credit cards : phone pay giving free credit cards (SBI,HDFC) .if I get a card through the phone pay ,it gets commissions from the bank.
📱Recharge & bills:: it charges every recharge plan and bills.
📽️ Advertisement : promoting the loans ,insurance mutuals funds.

3. 🥚GOOD UX DECISION ?
1️⃣I accidentally transfer money to unkown person, a option have in app contact phonepe support below the transaction details, and it helps to users raise a complaint on the transaction after the money will refund within days safely..👍🏻
2️⃣Without internet you can transfer money to your friends
How?
👉🏻 Specific numbers have in phonepe you can dial it. It asks person number, amount and UPI pin it helps to transfer money even without internet 🛜

4. 🔄ONE THING I 'D CHANGE?
🚨If many services are displayed one after another new users are confusing and suddenly clicks the unwanted options and it also crowded home page with so many options
⚫One more point i want to say🗣️
PhonePe already provides a 'More' option for accessing additional services, but it also displays several of those services directly on the Home Page. This takes up valuable screen space and makes the Home Page feel more crowded."

⏩MY IDEA 💡

My idea is reduce the number of options shown directly on the phonepe home page, instead of showing many services at once ,I will group them into categories like recharge & bills, loans , insurance, travel, mutual funds these are major for users it is to manage and it doesn't have any glitches .

🛑How it works?🤔

When the user taps recharge& bills option directly open and shows the related services we can use simply without any confusion this makes the home page cleaner and helps new users and people who need use daily paying bills.

⁉️💭 If you could change ONE thing in a phonepe app, what would you change?

I'd love to hear different perspectives from designers and users.
